

Nx Witness & Milesight OpenVision is an all-in-one video surveillance solution that streamlines the path to modern surveillance, combining the simplicity of ready-to-deploy systems with the flexibility of an open platform.

By embedding Nx Witness directly into Milesight OpenVision devices, the solution removes infrastructure complexity (no servers, no NVRs, no legacy hardware) and lowers total cost of ownership while preserving long-term flexibility, making it a strong alternative to closed/proprietary ecosystems.

An Open Alternative to Closed Surveillance Platforms

While many all-in-one surveillance solutions rely on proprietary ecosystems, the Nx Witness platform is open by design, giving organizations full control over their deployments and the freedom to scale or adapt systems over time. The Nx Witness + Milesight solution delivers the convenience of an integrated system while avoiding vendor lock-in, a key consideration for both enterprises and managed service providers.

"Milesight's OpenVision Series was built to address real-world deployment challenges,"

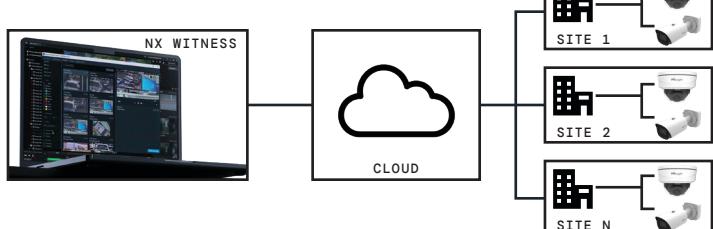

said Prince Cai, VP of Milesight Security. *"By embedding Nx Witness directly into our devices, we're delivering a true plug-and-play experience that simplifies installation, strengthens system stability, and enables intelligent video processing at the edge."*

Designed for Speed, Simplicity, and Scale

The OpenVision Series features low-power, compact designs engineered for demanding environments, including off-grid and space-constrained installations. With Nx Witness embedded at the core, systems can rapidly scale from single locations to large, multi-site environments, all managed through a unified interface.

By combining Nx Witness Enterprise with Milesight's OpenVision hardware, Network Optix and Milesight are delivering a practical, cloud-ready surveillance solution that prioritizes ease of deployment, operational flexibility, and long-term scalability.

All-in-One, Ready to Deploy

Nx Witness runs directly on Milesight OpenVision devices, delivering a true plug-and-play surveillance experience.

- No dedicated NVRs
- No complex infrastructure planning
- System online in minutes
- VMS + hardware work together out of the box

Simplicity Without Sacrificing Control

Delivers the convenience associated with closed systems while preserving flexibility, ownership, and control.

- Enterprise-grade VMS embedded at the edge
- Centralized visibility and management
- Clear separation between simplicity and lock-in

Open by Design

Unlike closed surveillance platforms, Nx Witness is open by design, giving organizations control over their deployments, data, and future growth.

- No proprietary ecosystem lock-in
- Freedom to adapt and scale over time
- Long-term flexibility vs short-term convenience

Built for Modern, Distributed Environments

Designed for real-world deployments, from distributed sites to temporary or infrastructure-constrained locations.

- Edge-based storage and analytics
- Low-power, compact hardware
- Works where traditional servers don't make sense
